Cryoanalgesia
an effective interventional palliative therapy

Cryoablation provides immediate and significant pain reduction\textsuperscript{1-5} and:
- Avoids the unfavorable side effects of other ablation technologies\textsuperscript{3,4,6-10}
- Is relatively painless with little procedural morbidity or complications\textsuperscript{1,3,6,8,10-13}
- Offers patients an improved quality of life\textsuperscript{3,6,9}
- Results in long term pain relief\textsuperscript{1,5,10,13-16}
- Can be repeated\textsuperscript{6,7,12}

Iceball visibility and image guidance provide procedural control\textsuperscript{3,5,8,9,13,15}
- Monitoring the iceball can reduce the risk of injury to critical structures\textsuperscript{3,8,13}
- Ablation zone can be precisely controlled\textsuperscript{6,10,12}

Cryoablation is indicated for:
- Benign or malignant lesions
- Cryoanalgesia
- Certain dermatologic disorders

Applications of cryoanalgesia are widespread, such as treating:
- Abdominal pain\textsuperscript{15}
- Occipital neuralgia\textsuperscript{17}
- Extremity pain\textsuperscript{2,9,16,18}
- Post-operative pain\textsuperscript{1,8,11,19}
- Pelvic pain\textsuperscript{2,3,5,20}
- Morton’s neuroma\textsuperscript{2,9}
- Back pain\textsuperscript{13,14,16}
- Chest wall pain\textsuperscript{2,3,11}
- Desmoid tumors\textsuperscript{21,23}
- Keloids\textsuperscript{24,25}
- Phantom limb pain\textsuperscript{26}
Applications of cryoanalgesia are widespread:

- Cryoanalgesia is used in various medical fields, including general surgery, dermatology, neurology, and oncology.
- It is also applied in thoracic surgery, ENT, gynecology, oncology, proctology, and urology.

Indications for Use:

- Cryoablation Systems are intended for cryoablative destruction of tissue during surgical procedures.
- Various Galil Medical ancillary products are required to perform these procedures.
- Galil Medical Cryoablation Systems are indicated for destruction of tissue during surgical procedures and for various Galil Medical ancillary products.

Contraindications:

- There are no known contraindications.

Warnings / Precautions / Adverse Events:

- A thorough understanding of the technical principles, clinical applications, and risks associated with cryoablation procedures is necessary before using Galil Medical products to conduct cryoablation.
- Use of such products should be restricted to use by or under the supervision of physicians trained in cryoablation procedures with a Galil Medical Cryoablation System.

A full list of the warnings, precautions, and adverse events can be found by referencing the respective device instructions for use or cryoablation system user manuals.
